FORUS

We are the professional manufacturer of Digital Voice Recorder (Telephone recorder, Mobile phone recorder). And also we concentrate our efforts on improving making innovative appliances such as Telephone scrambler (Voice scrambler) like an Anti-tapping device, and various kinds of Telephone Accessories. We made inroads into the global market since 2002 and are getting good feedback from our customers around the world.

Telephone CID Recorder FSC-1000

- automatic (manual) phone recording function
- caller ID function
- convenient file search function
- mobile phone recording function
- surrounding sound recording function
- convenient data management function
- remaining recording time checking function
- repeated playback and high – speed search function
- delete file function
- firmware upgrade function

“Just pick up the handset, please.”

Super-easy Automatic Recording Function

Recording starts when you pick up the handset and ends when you hang up the phone and the recording is saved. You can playback and hear the recording file immediately on the internal speaker or an earphone. You can choose the manual recording mode and record conversations you opt based on the situation.

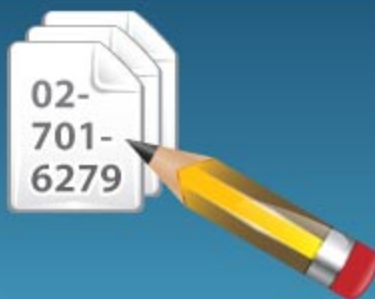

When you pick up the phone, the recording starts immediately requiring no additional operation. You can confirm that the recording is underway by looking at the LED light on that switches on.

CID

Caller ID Function

If the caller subscribed the caller ID (CID) service, you can see the caller information such as phone number, caller's name (or trade name), etc., like you do with your mobile phone after you stored the information of your acquaintances or business contacts in the phone book, etc. according to the user manual.

Convenient File Search Function

Since the recording file contains the information such as call start time (in year, month, date, hour, minute and second), caller's phone number, caller's name (or trade name), you can search the recording file very fast and easily.

Mobile Phone Recording Function

Not to mention, in addition to calls on fixed-line services like KT telephone service, internet phones, key phones, etc., you can easily record mobile phone calls using an ear microphone.

Recording Surrounding Sounds

Besides call recording, you can record conversations within a radius of 5 meters from the FSC-1000 using an external amplifier microphone. You can use the FSC-1000 for recording business talks with visitors in the office, meetings, conferences, etc. without buying an external recorder.

Microphone for
External Recording

Convenient Data Management Function

You can easily transfer the recorded MP3 sound source stored in the SD Card for replay or backup purpose. With a 2GB SD Card coming in the standard package offers you with a recording capacity of about 47 hours and maximum 2,000 recording files. And after you make a back up file for the bugged recording data in the hard disk, you can continue to use the SD Card after initialization of the card to get more memory space.

Auxiliary Hook Switch

Auxiliary Hook Switch is the device for automatic voice recording by installing it on the receiver of key phone or internet phone.

Recording is started and stopped automatically by picking the receiver up and down as the same way of automatic recording on the general wire telephone.

- 1 Push the sd card inside into the recorder and turn on the recorder after connecting the power.
Before connecting the power, three-stage switch and two-stage switch on the bottom of recorder and automatic/manual switch on the backside should be installed as follows;

- 2 Insert the receiver cable into the front of recorder after picking it out from the phone and then connect the enclosed grey color cable with the backside of recorder and the phone.
Check the dial tone by picking up the receiver.
- 3 Connect the auxiliary switch with the connection terminal of phone cable on the bottom.
Recording is started automatically at the same time of being connected.
- 4 Select the flat surface around the hook switch of phone and remove the dust on the surface where to be attached. Check whether the recording will be off by placing the auxiliary switch on the surface and putting the receiver down on it.
- 5 When there is no problem for operation, attach the auxiliary switch after detaching the release paper on the opposite side of auxiliary switch.
If there is a problem on the gap between the hook switch when operating the receiver, attach the spacer on top of the hook switch too.

Remaining Recording Time Checking Function

When you press the playback button during recording, the remaining time for recording is displayed by calculating the available memory capacity.

Repeated Playback and High-speed Search Function

You can listen to the pre-chosen portion of the recorded file infinitely, and can also do a high-speed search for the portion in the file you want to listen to during the playback.

Delete File Function

You can easily delete unnecessary recorded files after you finish listening.

Firmware Upgrade Function

If you need a functional upgrade, you can easily do it by copying the firmware upgrade file in the SD Card and insert it into the card slot in the product.

Applications for the FSC-1000 Telephone Recorder

- Important jobs over the phone, phone meetings, phone business talks.
- Oral contracts and important promises made during conversations.
- Phone conversations that may cause a legal conflict.
- Important phone conversations with institutes, persons and companies who may have bugging devices and/or may intend to bug the conversation.
- Recording phone conversations for lectures, for example, one-on-one foreign language lectures.
- Bugged recording to be used during legal actions against unexpected incidents such as phone frauds, voice fishing, stalking, etc.
- Job-related recording in the office for business talks, meetings, conferences, contract discussions, etc., using the surrounding sounds recording function.
- Various kinds of institutes and companies that lack a recording server.
- Professional offices such as lawyers, doctors, judicial scriveners, reporters, real estate agents, etc.
- Anybody else including individuals, homes, etc., who need phone recording.

**“Alas! I need to record a phone call
in the situation like this
but I don't have a recorder!!”**

Have you experienced a situation like this?

Get prepared in advance.

A phone recorder is **a necessity for business.**

A Strong Guardian Right Next To Me.
